

# SOCIAL SIMULATION

Kilian Theil

Chair of Artificial Intelligence

Data and Web Science Group

23 March 2021

# INTRODUCTION

**Kilian Theil**

PhD student @Chair of AI

**Prof. Heiner Stuckenschmidt**

Head of the Chair of AI

## CONTEXT: PROJECT CAIUS

- “Consequences of Artificial Intelligence on Urban Societies”
- Research project together with Prof. **Frauke Kreuter** (Uni Mannheim) & Prof. **Kai Eckert** (HdM Stuttgart)
  - [funded by Volkswagen Foundation](#) with **1.5M** for the next **4 years**
- Explores impact of smart cities on social (in)equality
  - Use case: **dynamic pricing of parking space** and its effect on **socioeconomic disparity**

## IN THIS PROJECT, YOU'LL ...

- ... build a **simulation model** mirroring the **car traffic of Mannheim** city in NetLogo
- ... implement a **dynamic pricing** mechanism for parking space & simulate its effects on the **socio-economic mixup**

# NETLOGO PROTOTYPE

- Participants of our Master's **seminar 2020** already developed a **prototype** in **NetLogo**:
  - Madeleine Aziz, Jens Daube, Paul Exner, Jakob Gutmann, Jonas Klenk, and Aamod Vyas
- You'll build upon this prototype and enhance it will **geo-spatial data** of the city

Delete + Add **Blank Button** normal speed ticks: 875  view updates on ticks Settings...

Setup **Go**

### Traffic Grid

cars: 300

demo-mode  On  Off

hide-nodes  On  Off

show-goals  On  Off

distribution-percentage: 40%

### Parking Fees

Initial Fees

Current Fees

yellow-lot-fee: 2

orange-lot-fee: 2

green-lot-fee: 1.5

blue-lot-fee: 2

How high should the fines be in terms of the original hourly fee?

finer-multiplier: 5 time(s)

How often every hour should one of the lots be controlled?

controls-per-hour: 1 time(s)

### Income Distribution

mean-income: 25882 €

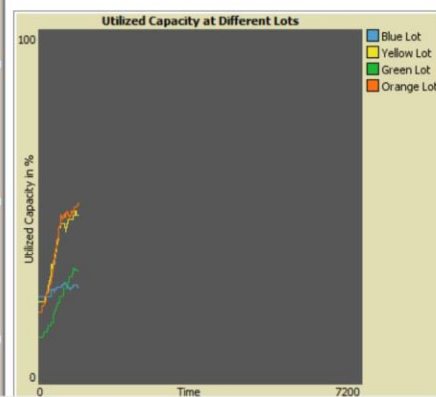

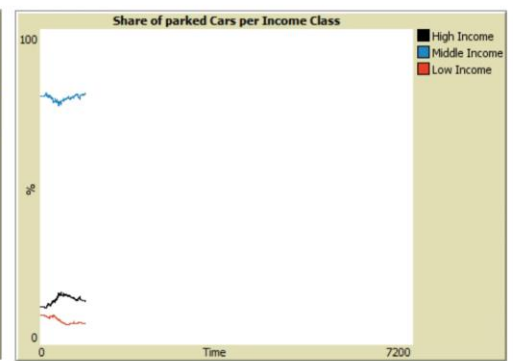

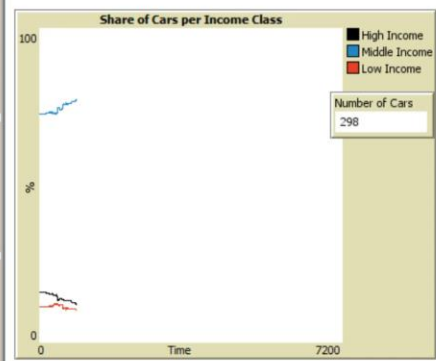

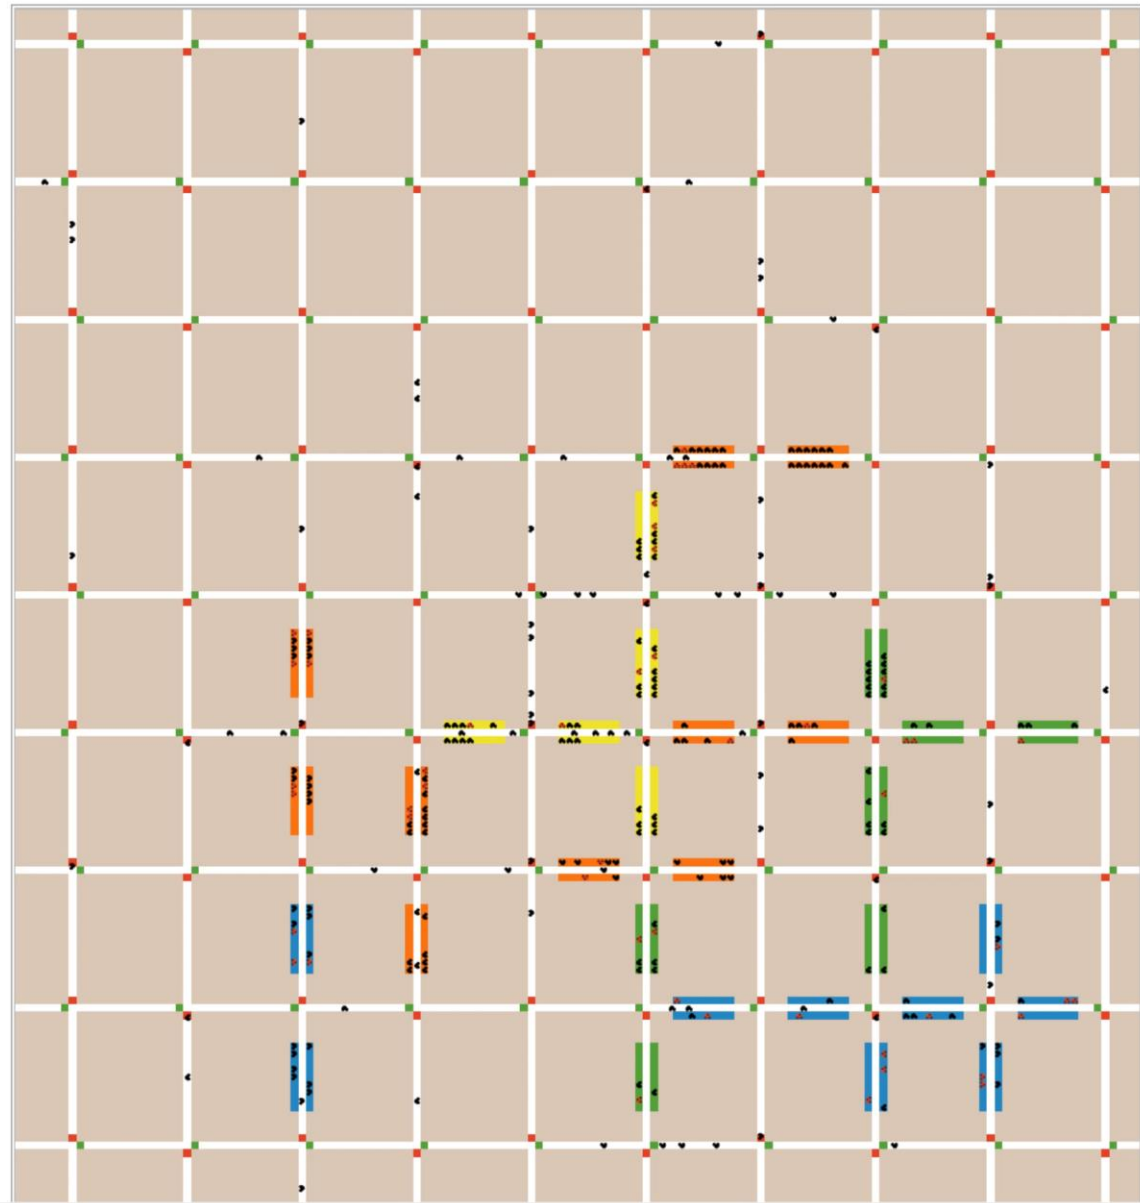

median-income: 22713 €

income-share: 0.005

Min Income in Model: 6275.61

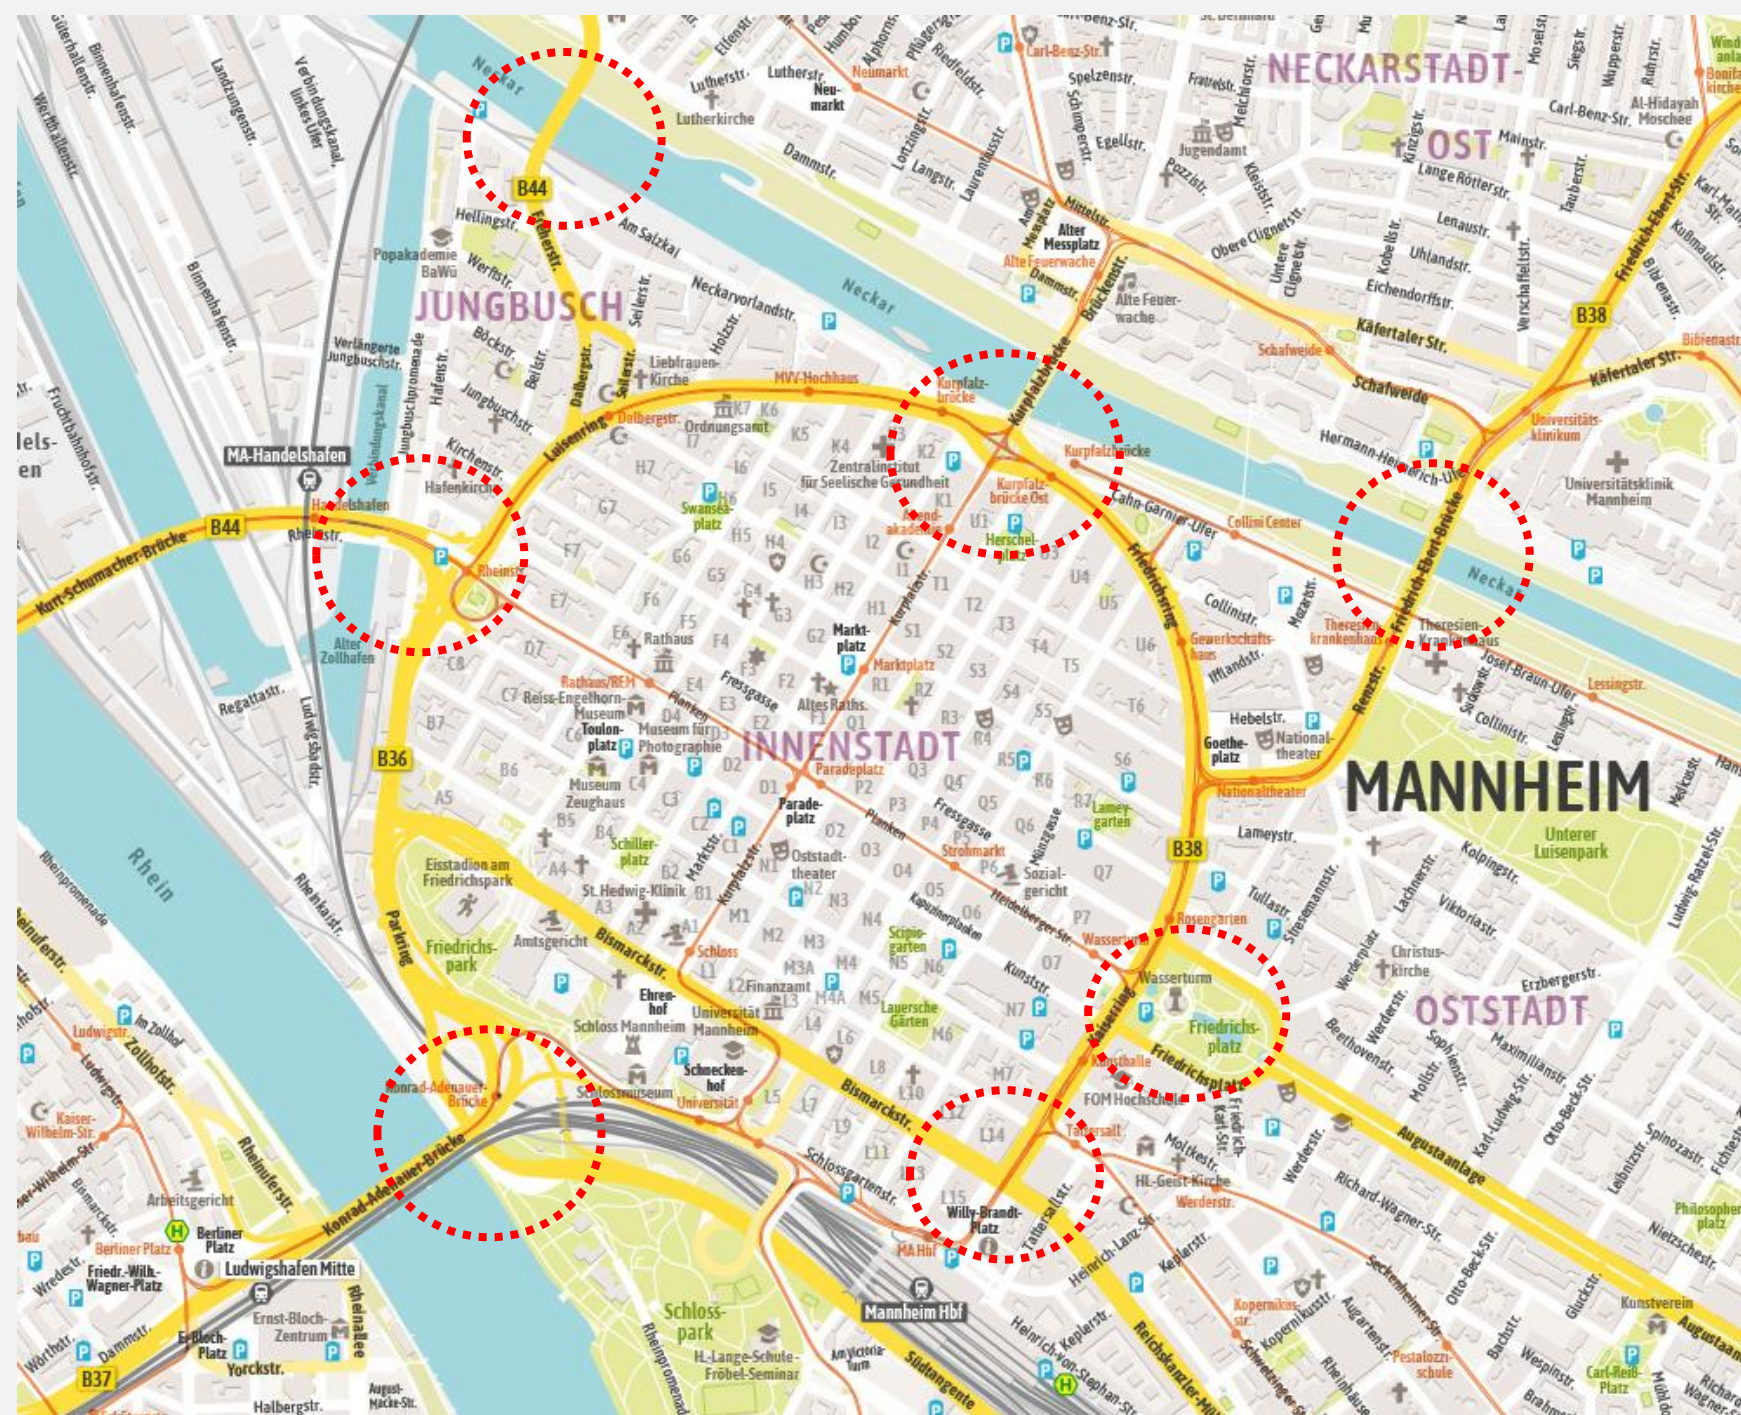

Mean Income in Model: 24794.13

Max Income in Model: 62450.9

# TASK

- Complete the NetLogo prototype by adding **main traffic arteries, ...**
  - Ring (around) Fressgasse, Bismarck- & Kunststraße (within)
- ..., **feeder roads and exits, ...**
  - Augusta-Anlage, Rhein & Neckar bridges, Bundesstraßen
- ..., and **parking facilities**
  - Parking lots & garages

- + parking spaces & garages
  - + ring road around the city
  - + Fressgasse, Kunst- & Bismarckstraße within the city
- (optional) What happens if one of the roads is closed?

# TOOLS

- Development will be done in NetLogo
  - [Link](#) to documentation
  - For more context information about ABM & NetLogo, please check out the slides of [last year's seminar](#)
- NetLogo [GIS extension](#)

## SOURCES & CONTACTS

- Mannheim's Geo Information System ([GIS](#))
  - City plans
  - Statistics of car users
- Two alumni of last year's "Social Simulation" seminar are writing their thesis with us:
  - Jakob Gutmann (M.Sc. thesis on dynamic pricing for parking space)
  - Paul Exner (B.Sc. thesis on automatic parking controls)

# MODALITIES

- You can **opt out** of the team project without failing the course **by April 5**
- **Bi-weekly meetings** to discuss progress
  - day & time will be determined via Doodle
- **Grading**
  - After 2 months: 1<sup>st</sup> presentation & *individual* report (**25%**)
  - After 4 months: 2<sup>nd</sup> presentation & *individual* report (**25%**)
  - After 6 months: final presentation & *group* report (**50%**)
