

Title: Workshop: Substantive SMiP Research Topics in Landau

Instructors: Tanja Lischetzke, Eunike Wetzel, and Benjamin Hilbig

Abstract:

In this workshop, Tanja Lischetzke, Eunike Wetzel, and Benjamin Hilbig will discuss substantive research topics that are studied in their labs with the attendees. In the first part, selected theories of emotion regulation processes (and individual differences there-in), ambulatory assessment studies and longitudinal data-analytic approaches will be discussed. In the second part, we will discuss research on the multidimensional forced-choice format as an alternative to rating scales and on individual differences in personality development, in particular with respect to the trait narcissism. In the third part, socially and/or ethically aversive personality and behavior will be discussed along with corresponding statistical modeling approaches (MPT/RRT models; SEM).
