

Title: Training: Good Scientific Practise

Instructor: Arndt Bröder

Abstract:

The course will sensitize young researchers to various threats of validity in research beyond bad design or misapplied statistics, namely ethical aspects. These span various shades reaching from merely missing transparency to actual fraud. Hence, we will discuss ethical issues of research. This will include the formal guidelines by the DFG and other research organisations as well as the „seven deadly sins of psychology“ as described in the book by Chris Chambers (2017). The course will include discussions and brief chapter presentations prepared by (teams of) SMiP students.

Assignment:

(Teams of) PhD Candidates will need to prepare a brief chapter presentation for the meeting.

Credits: 2 workshop days
